

Full-page format

Full-page illustrations can be photos, renderings or schematics further supporting the abstract. They can be included in bitmap or vector format. Full-page illustrations need to have an aspect ratio of 216:154 corresponding to A5 landscape format + 3 mm bleed margin on all four sides. This margin (indicated by small crosshairs at the four corners of the page) is required for print production but cut away digitally to generate the PDF for online use. It is generally recommended to include photos or any other bitmap content at maximum resolution cropped to the aspect ratio 216:154. For vector format it is recommended to use this example page (size 216x154mm) as template.

Photo credits

To acknowledge the creator of a photo or illustration the `\label{}` in the first line of the Latex wrapper of the photo or illustration file is referenced via a `\pageref{}` command in the Photo credits section of the book.
